

# Quality

## Getting the Job Done Right— Time after Time.

Repeatable outcomes. Measurable performance benchmarks. Consistent quality standards. At Teamvantage we do not start a project without conducting advanced quality planning, establishing a qualification process, creating a process control plan (Cpk/Ppk studies) and planning for ongoing production evaluation.

Our cross functional team performs a detailed analysis to look for potential failures (PFMEA) before we begin—that helps us solve problems up-front rather than during the manufacturing process where it can cost you time and money.

Teamvantage offers multiple state-of-the-art coordinate measuring machines (CMMs) and vision systems that are run by experienced metrology technicians. All of our CMMs operate with the most current version of PC-DMIS software.

We utilize OGP Smartscope vision systems when measuring silicone, elastomer and micro molded components.

Teamvantage is certified to ISO 13485:2003, ISO 9001:2008 and AS9100C by our registrar TUV America, Inc. We are ITAR registered and U/L recognized. Certificates are on site and available for inspection. Our 111,000 square foot climate controlled facility is registered with the FDA and operates under Current Good Manufacturing Practices (CGMP).

## Quality Policy

We are committed to meeting customer expectations and requirements through continual improvement as well as the effective implementation and maintenance of our Quality Management System.
